

Black Pepper[®] *Yachts*

OUR STORY

Michel Douville de Franssu
Black Pepper Founder

An agricultural engineer by training, it was under other skies that Michel dreamed of his first boats. It was in Africa, the land of his birth, that he created his first company processing natural materials for the perfume and flavour industry. Brown flavours are his specialty, coffee, cocoa, vanilla

but also Black Pepper... the name of the shipyard was born. Passionate about the sea and boats from an early age, it was in 2007 that his nostalgia for the sea caught up with him. An aesthete at heart, he couldn't find a "boat to suit his taste", and the urge to create his own travel companion grew. And so, with a touch of madness, he set about building "the" boat he had in mind: Code 0.

Black Pepper® is convinced that in every field it is possible to progress by bringing together talent, training people, and providing them with innovative technologies, new methods and new know-how.

ENGINEERING & DESIGN

Product design, execution and development are entrusted to renowned naval architects and sailors. Our design team, the experience of our engineers and the inspection bodies with which we collaborate, guarantee the reliability of our products, designed to withstand the most extreme conditions.

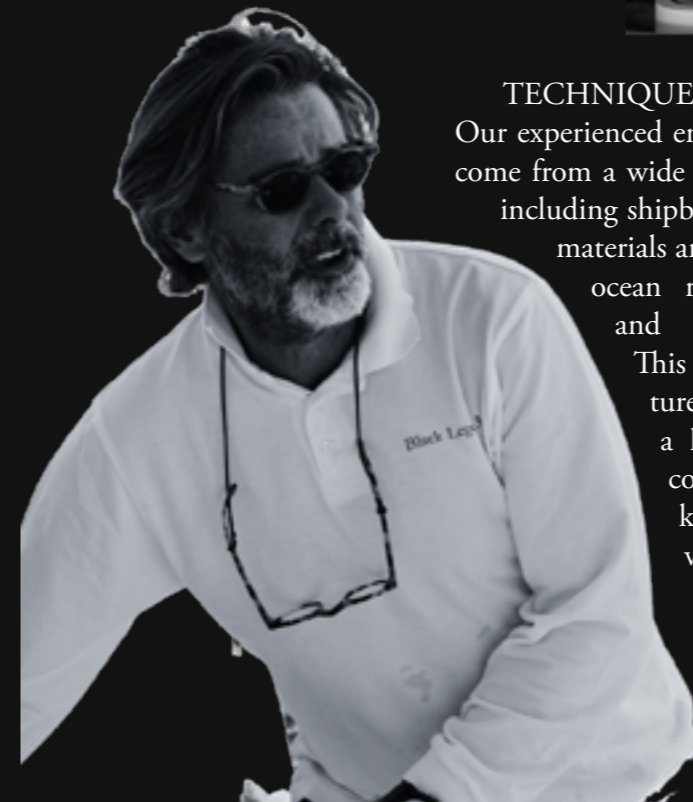

TECHNIQUE & KNOW-HOW

Our experienced engineers and craftsmen come from a wide range of backgrounds, including shipbuilding, the composite materials and chemical industries, ocean racing, cabinetmaking and artisanal upholstery. This melting pot of cultures lends Black Pepper® a highly original touch, combining traditional know-how with innovative, modern production techniques.

FINISHING & BRANDING

Our boats offer luxurious finishes in a neo-industrial style and the very best in performance and safety. They combine quality and modern materials, where exotic wood rubs shoulders with leather, carbon and stainless steel. No frills, just an efficient, sober, clean and chic style with a touch of impertinence, showcasing construction details that are usually hidden.

OUR KNOW-HOW

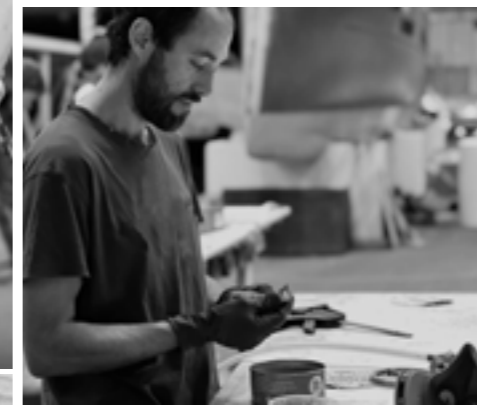

Our craftsmen

The details and meticulous know-how of our craftsmen enable us to achieve the highest standards of quality and unique creativity. At Black Pepper our craftsmen are encouraged and do indeed express themselves freely in their work.

A community of kindred spirits who have made the brand and its style their own, are today at the helm of production, and constantly nurture the creative process. Each yacht is unique, accumulating skills in fields as varied as composite, wood, paint, electricity, electronics, deck fittings, rigging, mechanics or plumbing.

Our Design Team

The engineers in our Design Team, always on the lookout to ensure that the brand is at the cutting edge of innovation and new technologies, are constantly working to improve our boats. Skills acquired in building Imocas for ocean racing are also applied to the construction of our production yachts.

Code 0.1

Vintage Day Sailer

A worthy successor to the iconic Code 0 that made Black Pepper Yachts famous, this elegant «Day Boat», with her neo-classical silhouette, adopts the aesthetic codes of her predecessor with a new bias: she had to be different; she had to dare a little renewal, without of course transgressing the family spirit... This time, the discerning eye will notice the slight sheer and the beginning of an inverted bow. Change without change! A real challenge...

Launched in 2019 in her classic version, she continues to evolve, as is often the case with our Codes. Since 2023, she has also been available in a “Sundeck” version.

This neoclassical-inspired day boat, built in carbon and designed for cruising and racing, not to mention her perfect sea-keeping in strong winds and her habitability, reveals tremendous performance potential, thanks to her powerful rig, her very strict weight specifications, her ballast ratio, her draught and her equipment.

Sailing aboard a Code 0.1 is disconcertingly simple; all manoeuvres are designed to be easy with everything within reach: self-tacking jib, cockpit manoeuvres, will delight the captain and his crew as well as the solo sailor. The lightness of the boat is exhilarating! Acceleration is immediate in the slightest breeze, and the hull slices through the water with ease.

Versions with lifting keels provide access to all shallow harbours. Dual rudders ensure optimum steering, and the carbon rig allows infinite trimming. Her wide beam provides both power and stiffness, essential for performance and comfort. Her headroom and volume provide the comfort of a true cruiser, essential for family trips.

Code 0.1

635 ft²
Upwind sails area

36.4'
LOA

2 400Kg
Weight

The Code 0.1 is available in 3 versions:

- Classic: closed cockpit
- Sun-Deck: open cockpit
- Spirit: Marconi mainsail and short keel

Each of these versions can be supplied as standard «Sea» or «Lake» with a high performance rig.

- Fixed or lifting keel
- Electric or diesel engine

Length overall	36.4'
Beam	9.84'
Draft	3.1/8.2'
Weight	2,400 kg
Rig	Carbon
Sails area	635/1,636ft ²
Engine	14HP

OPTIONS

- Modular, customizable interior fittings and equipment
- Electronics, sails and equipment are available à la carte.

On board, everything is designed to be simple, efficient, functional and easy to maintain. A boat must perform well, be easy to maintain and look stylish...
